Introduction

Vidar malware family has been operating since 2018. This malware family, which has spread to many countries, targets individual computer users and organisations indiscriminately.

Today, many important information is stored on personal or business computers. Stealer software wants to take advantage of this situation. Therefore, increasingly sophisticated software is being created and marketed.

One of the most distinctive features of Vidar malware is server communication. This aspect of communication, which is analysed in detail in this report, allows the command and control server to remain hidden.

In this report, the Vidar malware family is analysed in detail. This malware family, known as Stealer software, has been examined in detail how this malware family affects systems and what techniques they use to perform these behaviours.

Technical Analysis

Stage 1

SHA256	ea221776f53f2c4e9761e92aac53cc4c31f2340346a718d31907932fd684fae1
MD5	57945874573bff6a84d4f8bb94afd0af
File Type	PE32-EXE

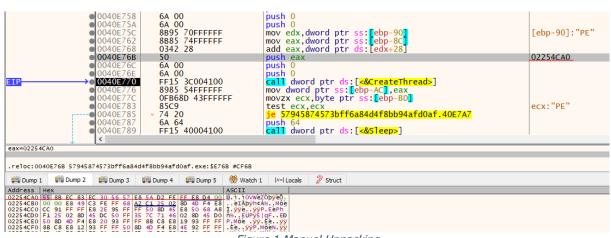

Figure 1 Manuel Unpacking

It was found that the malware, which was packaged, executed the relevant function with another thread after unpacking.

Figure 2 Main Function After Unpacking

The main function extracted from the package is as shown in Figure 2.

Stage 2

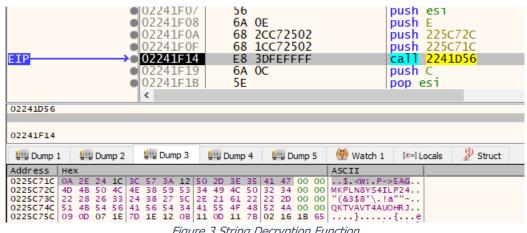

Figure 3 String Decryption Function

When the parameters given to the function "2241D56" were analysed, it was determined that the first parameter was the xor key and the other key was the cipher expression.

Ciphertexts and xor keys respectively:

- Plain text..: GetProcAddress
 - Xor Key..: 0A 2E 24 1C 3C 57 3A 12 50 2D 3E 35 41 47
 - String..: 4D 4B 50 4C 4E 38 59 53 34 49 4C 50 32 34
- Plain text..: LoadLibraryA
 - Xor Key..: 01 56 28 33 1D 5D 37 45 2E 2B 2C 79
 - String..: 4D 39 49 57 51 34 55 37 4F 59 55 38
- Plain text..: IstrcatA
 - Xor Key..: 5B 29 30 37 2A 2F 3E 74
 - String..: 37 5A 44 45 49 4E 4A 35
- Plain text..: OpenEventA
 - Xor Key...: 7E 35 37 5C 72 31 36 27 4C 1B
 - String..: 31 45 52 32 37 47 53 49 38 5A
- Plain text..: CreateEventA
 - Xor Key..: 10 4B 2B 26 41 2E 75 43 2A 3D 30 0E

jne 225020B

02250204
push esi
call dword ptr ds: [<&ExitProcess>]
```

Figure 8 IP Checking

If **"block"** is found in the incoming response, the programme closes itself. With this method, the malware is prevented from running on computers with a specific IP address.

After passing the IP filter, information collection starts. The information collected is as follows:

- Computer Name
- Operating system information
- Language, location and keyboard language information
- Processor information
- Pulling the number of cores
- List of applications running in the background
- Display information such as screen resolution
- RAM information
- Name and version information of the software installed on the device
- Antivirus software information running on the device
- Screen photo

```
O224F3C4

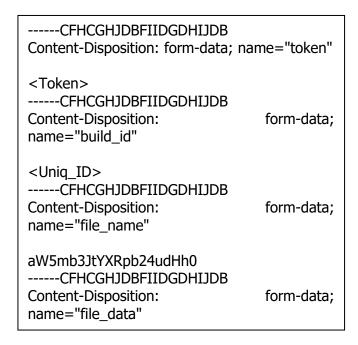

push esi
mov esi, dword ptr ss: [ebp+C]
push esi
mov esv, 40000001

push ebx
push dword ptr ss: [ebp+14]
push dword ptr ss: [ebp+14]
push dword ptr ss: [ebp+16]
push esi
push dword ptr ds: [call d
```

Figure 9 Converting to Base64

This collected information is combined and converted into base64 character set. In addition, the file name predetermined as "information.txt" is also converted to base64 character set.

The collected information is sent to the server in a POST request. Http request content is as follows:

After the collected information was sent to the relevant IP address, it was determined that a DLL file named "sqlx.dll" was downloaded by sending a GET request to "https[:]//88.198[.]191.199:2920/sqlx.dll". After the DLL file is downloaded, it is determined that critical information specific to the computer user is collected.

Targeted browsers:

- Chrome
- Firefox
- Opera
- OperaGX
- Edge

Other targeted applications:

- Monero
- WinSCP 2
- FileZilla
- Microsoft Outlook
- Discord
- Steam
- Telegram

It was found that the malware collects some information if the targeted browsers are present on the device. This includes:

- Saved password information
- Cookie information
- Autofill data
- Last visited 1000 URL address information
- Bank cards information stored on the scanner

The collected information is converted to base64 character set and sent to the server with a POST request.

The malware was also found to download a PE file.

```
| Duty | Date | December | Decemb
```

Figure 10 File Downloading

The file sent from the server is saved in the "C:\\ProgramData\\" directory. The relevant file could not be accessed because the server was down.

After downloading the file, the programme deletes itself and some associated files by executing the following command.

```
/c timeout /t 5 & del /f /q "C:\\path\\to\\malware\\malware.exe" & del "C:\\ProgramData\*.dll"" & exit
```
